DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-4,7 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The radio signal processing circuitry and the printing processing circuitry critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The radio signal processing circuitry and the printing processing circuitry are both essential elements to the applicant's claimed invention but are not written explicitly in the description as provided.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Kumar (US 5,294,782).

For claim 1, Kumar teaches a handheld mobile telephone communication device that comprises a support structure; an antenna mounted on the support structure for transmitting and receiving radio signals; radio signal processing circuitry positioned on the support structure to process the radio signals; and a speaker and microphone arrangement positioned on the support structure and operatively connected to the radio signal processing circuitry, wherein a printhead is positioned on the support structure to carry out a printing operation; and printing processing circuitry is positioned on the support structure to control operation of the printhead (Col 4 Lines 15-60; Figs 1; 6).

For claim 2, Kumar teaches in which the radio signal processing circuitry and the printing processing circuitry are configured so that the printing processing circuitry and the radio signal processing circuitry can function simultaneously (Col 4 Lines 15-60; Figs 1; 6).

For claim 3, Kumar teaches which the radio signal processing circuitry and the printing processing circuitry are in the form of at least one application specific integrated circuit (Col 4 Lines 15-60; Figs 1; 6).

For claim 4, Kumar teaches in which the radio signal processing circuitry is that of a mobile telephone (Col 4 Lines 15-60; Figs 1; 6).

For claim 5, Kumar teaches in which the printhead is a page width printhead (Col 4 Lines 15-60; Figs 1; 6).

For claim 6, Kumar teaches an ink distribution unit that is arranged on the printhead to supply ink to the printhead (Col 4 Lines 15-60; Figs 1; 6).

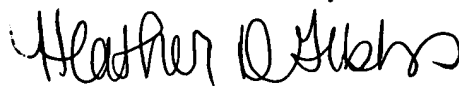

For claim 7, Kumar teaches a print media feed mechanism for feeding print media relative to the printhead so that the printing operation can be carried out the print media (Col 4 Lines 15-60; Figs 1; 6).
